

theory.

Σ - covariance matrix

Tw. $L \sim L$ X_1, X_n s.t. multivariate

S - oddly

$$X \sim N(\mu_m, \Sigma \sqrt{m})$$

$$S^2 = \frac{1}{n} \sum (x - \bar{x})^2$$

$$\bar{X} \sim N\left(m, \frac{\Sigma}{\sqrt{m}}\right)$$

$$\bar{X}_m \sim N\left(m, \frac{\Sigma \sqrt{m}}{\sqrt{m}}\right)$$

$$L \sim L \quad N(\mu_m, \Sigma \sqrt{m})$$

$$L_1 \sim L \quad N\left(m, \frac{\Sigma}{\sqrt{m}}\right)$$

Edge weights multivariate

$$m = E(d)$$

$$m \rightarrow 30 \quad t_B \Rightarrow q(t_B) = \frac{1-d}{2}$$

$1-d$ - previous edges

$$P\left(\bar{X} - t_B \frac{\Sigma}{\sqrt{m}} \in L_m \subset \bar{X} + t_B \frac{\Sigma}{\sqrt{m}}\right) = 1-d$$

$$E \approx S$$

$$m \in \mathbb{N}$$

$$\bar{X} - t_B \frac{\Sigma}{\sqrt{m}} \in L_m \subset \bar{X} + t_B \frac{\Sigma}{\sqrt{m}}$$

$$1. X \sim N\left(m, \Sigma\right) \Rightarrow \bar{X}_m \sim N\left(m, \frac{\Sigma}{\sqrt{m}}\right)$$

$$2. Y_m = \frac{\sum x_i}{m} \Rightarrow Y_m \sim N\left(\mu, \frac{\Sigma}{m}\right)$$

$$3. Z_m = x_1 + \dots + x_m$$

$$x_i \sim N(\mu, \Sigma) \Rightarrow Z_m \sim N\left(m \cdot \mu, \Sigma \sqrt{m}\right)$$
